

PRESSGLASS

NEW OPPORTUNITIES FOR THE
CONSTRUCTION INDUSTRY

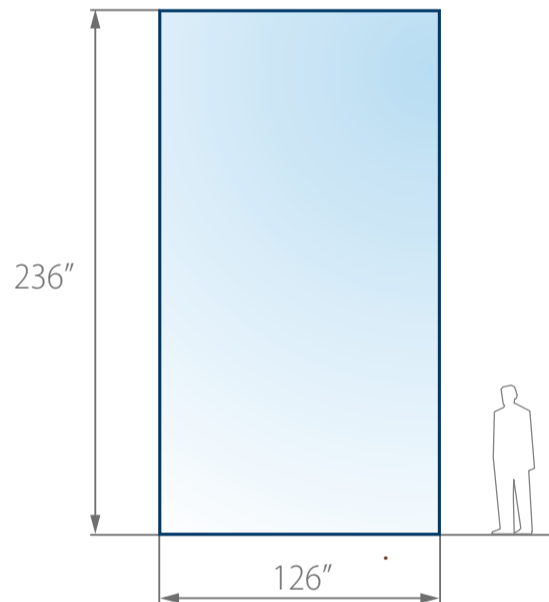

XTRA LARGE GLASS

WHY

Enjoy XTRA views with no divisions! With our newest technology, we have increased the maximum size of glazed units for the construction of even larger glazed frames. Measuring 126" wide and 236" tall, XTRA Large glass offers the possibility to transform ordinary facades into well-lit open views. Whatever the project is, a sizable seamless perspective is yours to maximize.

HOW

Using state-of-the-art machinery from our world renowned and reputable suppliers, XTRA Large glass is produced in a highly automated process. The use of a sorting system enables the handling and storage process to be virtually "hands-free", which simultaneously reduces the risk of scratches and ensures quality. Products are available in insulated, heat treated, HST, laminated or digitally printed variants.

WHERE

No compromises in projects are now necessary - glass with such dimensions gives a wide range of possibilities. Offices, apartments & residential buildings, shop windows and all modern construction projects where the design requires a glazed space without divisions are prime areas to showcase an expanded panorama.
